RICE

Basmati Rice

Rice, is One of the biggest essential yields of the world. So many qualities and types are being cultivated on Earth but **Basmati Rice** is much prominent and distinguished in international market due to its supreme quality, exotic taste, aroma and finishing. This king of all varieties of rice which is highly aromatic, long and elegantly thin, has been on royal menus of various cultures as the main dish. From the pilav of Turkey, polou of Persia, and the pulau of Sub continent it has been served to great sultans, maharajahs, shahs and emperors. Spices, nuts, dried fruits, vegetables and herbs are a natural for Basmati rice. Basmati rice transforms rice dishes into extraordinary meals.

Basmati Rice is one of the biggest exporting yields of Pakistan and fastest growing industry. Punjab and Sindh are main rice growing areas. The coarse IRRI varieties are grown in Sindh and both Basmati and IRRI is grown in Punjab.

Although all Basmati Varieties are fragrant rice of highest quality. But Super Basmati, is a premium variety from Pakistan and most prized of the Basmati varieties. The grains of Basmati rice are much longer than they are wide, and they grow even longer as they cook. They stay firm and separate, not sticky, after cooking. Basmati rice is available both as a white rice and parboiled rice.

Processing capacity

DF maintains quality and sustains a balance of production and time. The unit-wise distribution is as follows:

Parboiled Unit:- 100 Ton/day

Processing Unit I:- 7 Ton/HR

Processing Unit II:-10Ton/HR

DF is designed keeping in view the instant honore of huge supplies to the markets with optimum quality.

Technology

The new plant is equipped with state of the art technology. DF is set up with the latest technology used in Japan, Europe and China. High-tech processing equipment and control system is responsible for maintenance of quality. This system and our dedicated team of quality and control managers work hard to bring the utmost rice.

Ware house facility

DF houses a spacious and hygienic warehousing facility with the capacity of 10000 MT. This allows the managements to be more flexible in their storage of raw materials and also for production. Stocks are monitored time-to-time and fumigated.

White Rice

Cleaned paddy is dried to reduce moisture content. This is achieved by passing through vertical dryer. Dried paddy is processed through different classifiers to remove impurities. Husker removes husk from paddy. Husk is separated through aspiration system and Brown rice is achieved.

Parboiled Rice

DF produces finest quality of parboiled rice. Parboiled plant is constructed with the collaboration of famous Indian manufacturer. Parboiled process involves soaking, streaming and drying of rice. Drying is done through vertical dryers. Dried paddy is passed through paddy cleaner and paddy graders which removes dust particles, other foreign matters and under size grains. Clean paddy is passed to the husker who removes the outer layer of the rice kernels and brown rice is achieved.

Milling Of Rice

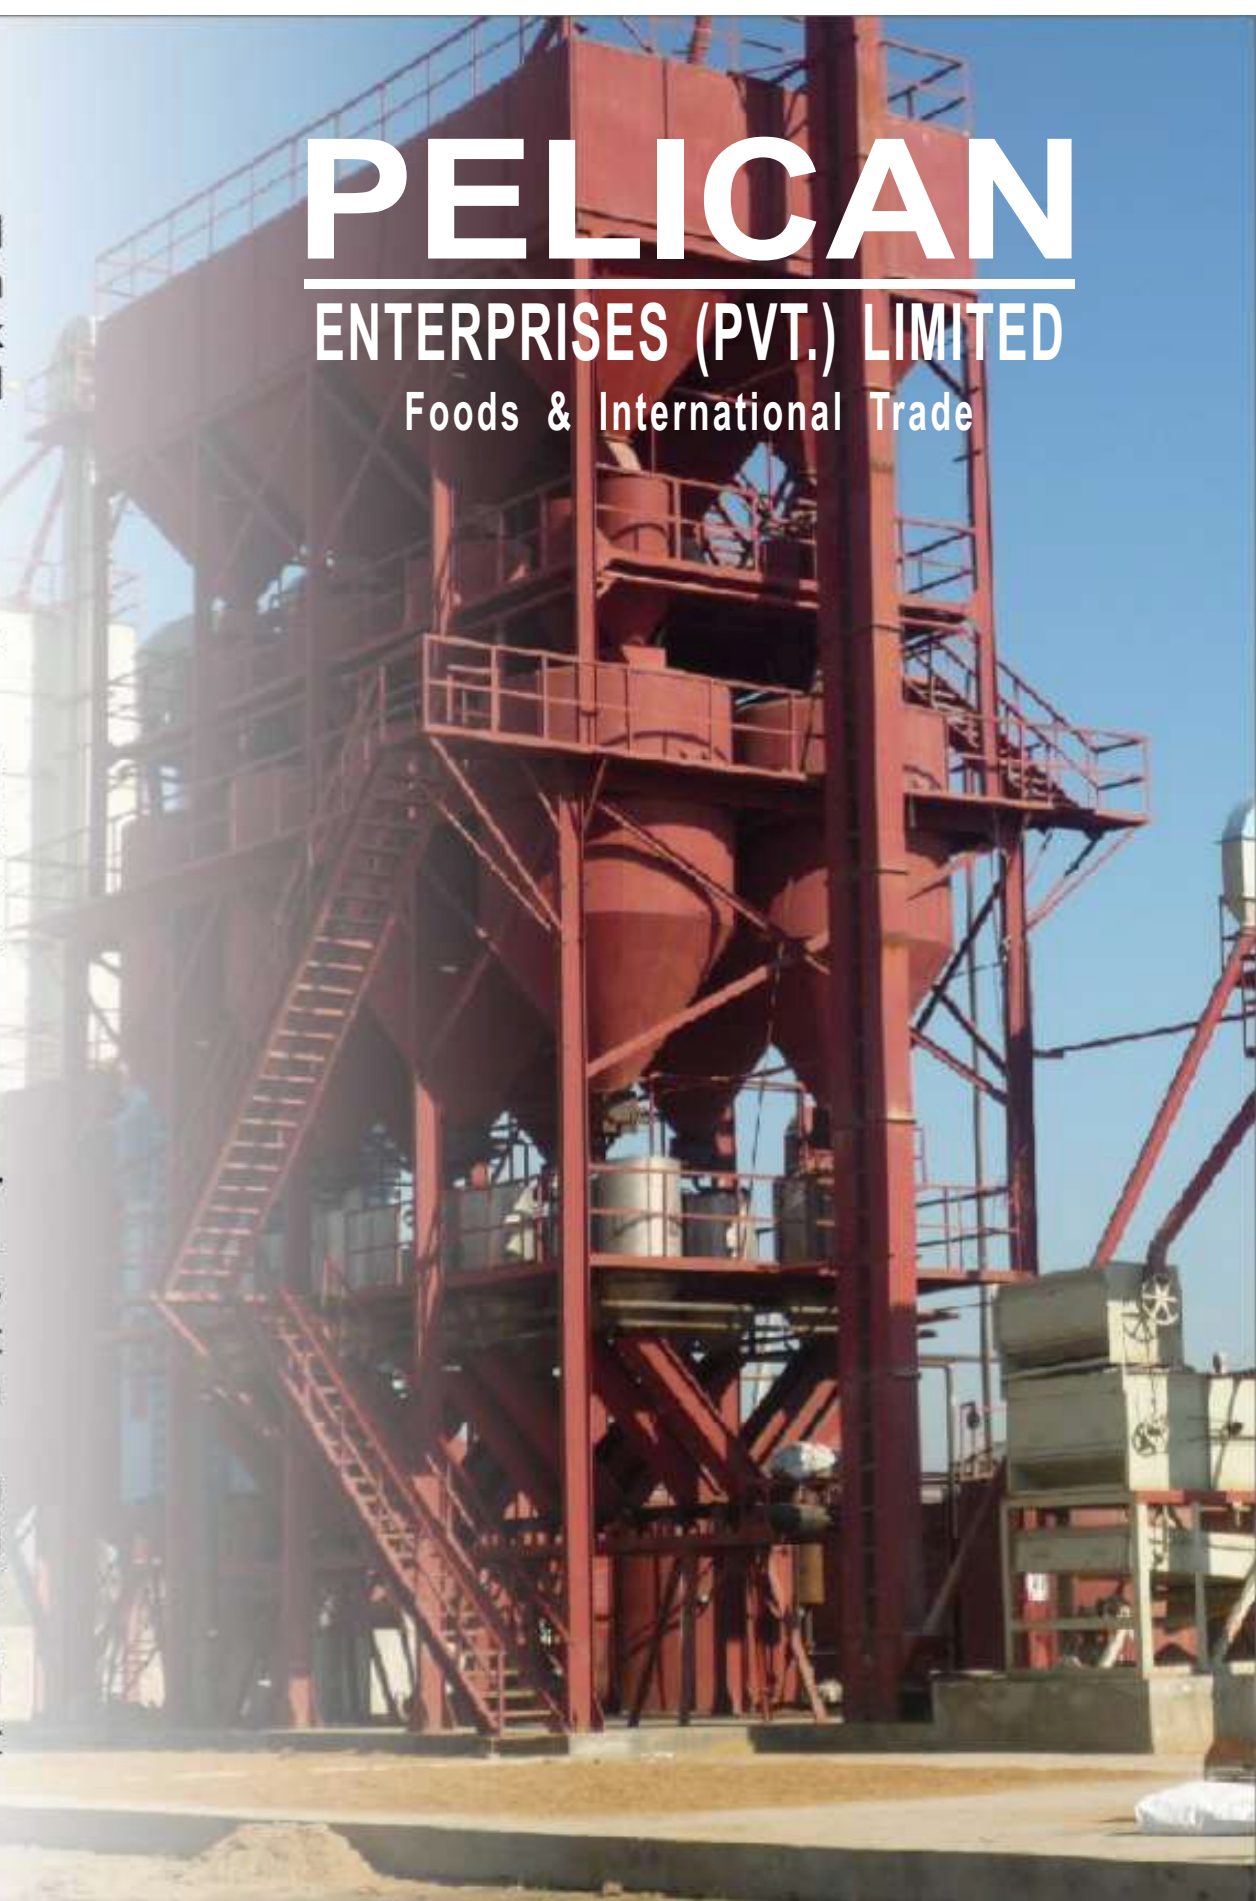

Brown rice is fed to multifunctional cleaning machines which under abrasive pressure removes the bran layer revealing polished rice. Polished rice is then passed through mist polisher, which is imported, from Satake Japan. The Satake KB60 mist polisher put less pressure on rice due to its two stage milling chamber, which result in a superior products and longer shelf life.

After polishing rice moves from different stages of grading. Grading is the process of removing the broken from head rice and sorting them into fractions of different length, and is stored in Sortex bin. Rice grains are sorted by latest Satake Japan sorting machines, **(RMGS 1402)** which separates discoloured grains from normal grains. After sorting again the grading is done, to ensure perfect quality and stored in bins. The product packed is in different packs.
